

Microscale Chemistry Experiments
Using Water and Disposable Materials
with 65 videos on attached DVD

Mahmoud El-Marsafy, Peter Schwarz, Metodija Najdoski

In memoriam of Viktor Obendrauf

Kuwait Chemical Society
Al-Roadha, Block 4, St. 42, H. 13
P.O. Box 39151 Nuzha, Kuwait
2011

CONTENT

Introduction

Safety first	3
---------------------------	---

Part I: Microscale materials and techniques.....5

1.1. No-cost materials.....	6
1.1.1. Disposable containers.....	6
1.1.2. Tray and dust bin	8
1.1.3. Ampoule burners	8
1.1.4. Candle burner	10
1.1.5. Piezo-fuse from a cigarette lighter	12
1.2. Low-cost and other materials	14
1.2.1. Syringes	14
1.2.2. Two-pan scale	15
1.2.3. Digital pocket scale.....	15
1.2.4. Digital multimeter.....	16
1.2.5. Wellplate 6	17
1.3. Measurements of volume and mass.....	18
1.3.1. Preparation of syringes for measurements.....	18
1.3.2. From milliliters to microliters of water	20
1.3.3. Water and syringe to measure volume of solids.....	22
1.3.4. Preparing a two-pan scale for weighing.....	23

Part II: Experiments25

1. Water in air, soil and food	
1.1. Water in air	25
1.2. Water in dry soil.....	27
1.3. Water in different fats	28
1.4. Water content of eggs, potatoes and red cabbage.....	30
1.5. Potatoes in water and in salt water	33

2. Properties of water	37
2.1. Not all transparent and colourless liquids are water.....	37
2.2. Electric conductivity of water samples.....	39
2.3. Density 1: Different water samples	41
2.4. Density 2: Anomaly of water during cooling	44
2.5. Density 3: Divers in fresh water and in sea water	47
2.6. Density 4: Cartesian diver.....	49
2.7. Freezing point: Change of temperature during water cooling	52
2.8. Melting point: Change of temperature during heating of ice	55
2.9. Boiling points: Change of temperature during more heating	57
2.10 Boiling under reduced air pressure	60
2.11. Increase of pressure and volume during boiling	62
2.12. Decrease of volume and pressure during condensation	64
2.13. Balloon experiment: Volume changes in a microwave oven	66
2.14. Water cycle: Evaporation, condensation, precipitation	67
2.15. Surface tension 1: Metals floating on water	69
2.16. Surface tension 2: More effects of washing-up liquid.....	71
2.17. Visualization of the dissolving process.....	73
2.18. Comparison of solubility: Sugar, salts, citric acid	75
2.19. Making a supersaturated solution of sodium acetate.....	77
2.20. Volume change during the mixing of water and ethanol	80
2.21. Model experiment on volume change during the mixing	82
3. Air and oxygen in water.....	85
3.1. Water dissolves only a little air	85
3.2. Winkler test for dissolved oxygen	87
3.3. Air supply and oxygen consumption (BOD5) in a sewage plant.....	91
4. Separation of pure substances mixed with water	97
4.1. Separation of sodium acetate by crystallisation from a supersaturated solution.....	97
4.2. Crystallization of sodium chloride from a salt solution.....	99
4.3. Separation by using differences in density.....	101
4.4. Carbon dioxide from a Cola beverage	102
4.5. Spaghetti dance in sparkling water.....	104
4.6. Heating a Cola beverage to dryness	106
4.7. Pure water by distillation of a Cola beverage.....	108
4.8. Paper chromatography: Separation of dyes from felt tip pens	111

5. Chemical reactions of water	113
5.1. Analysis.....	113
5.1.1. Volumetric reaction of calcium and water.....	113
5.1.2. Drop electrolysis: Decomposition of Petunia extract by electricity.....	115
5.1.3. Electrolysis in a pipette	118
5.1.4. Electrolysis of water in two ampoules	120
5.2. Water by mineral dehydration.....	123
5.2.1. Decomposition of malachite.....	123
5.2.2. Decomposition of a transparent gypsum mineral	126
5.2.3. Water by decomposition of copper(II) sulfate pentahydrate	127
5.3. Synthesis.....	130
5.3.1. Reaction of water with copper(II) sulfate	130
5.3.2. Water by combustion of methylated spirit	132
5.3.3. Water synthesis from oxyhydrogen gas in a eudiometer	134
5.3.4. Photosynthesis: Water for the biomass of growing barley.....	136
6. Water as an acid and as a base.....	139
6.1. An acid-base indicator from blue Petunia petals.....	139
6.2. Reaction with concentrated sulfuric acid: Water as a base 1	142
6.3. Hydrogen chloride gas fountain: Water as a base 2.....	145
6.4. Ammonia gas fountain: Water as an acid.....	148
7. Beads models of atoms and molecules.....	151
7.1. Models of atoms	151
7.2. Assembling molecular models of water and its elements.....	152
7.3. Combining models of water molecules	154
